

ESTEBAN CHAVES OBANDO

Junior Software Engineer — Software Developer · Software Testing · QA · Data

San José, Costa Rica | +506 6153-3205 | esteban.alp10@gmail.com

PROFESSIONAL PROFILE

Junior Software Engineer and recent Systems Engineering graduate with enterprise experience at Mastercard and HCL Tech across software testing, release workflows, technical documentation, and data analysis in Agile teams, English-speaking environments. Hands-on foundation in Java, object-oriented programming, SQL, Git/GitHub, and JUnit through engineering coursework and personal projects. Familiar with CI/CD and microservices architecture, currently building practical cloud skills in GCP and AWS. Focused on contributing to backend services and improving software quality within a collaborative engineering team.

PROFESSIONAL EXPERIENCE

MASTERCARD — Intern, Associate Consultant

Jan 2026 – Mar 2026

- Processed and analyzed large structured datasets using SQL and Python, generating performance insights that directly supported client-facing business decisions.
- Built KPI dashboards and analytical models in Excel, surfacing optimization opportunities across client operations.
- Prepared and delivered executive-level presentations in English, translating complex data findings into clear narratives for technical and non-technical stakeholders within a disciplined consulting delivery model.

HCL TECH — Test Engineer

Aug 2025 – Dec 2025

- Executed functional and regression testing cycles across enterprise software applications, identifying and precisely reproducing defects across multiple release cycles.
- Produced technically detailed bug reports in compliance with testing procedures and security controls, providing feedback that supported release stability and software quality assurance pipelines.
- Maintained accurate test case documentation under fast-paced Agile delivery timelines, gaining hands-on exposure to structured software development and release workflows.

PROJECTS

Ragebait — 2D Platformer & Game Engine (C++, Lua, SDL2)

- Designed and built a custom entity-component-system (ECS) architecture with data-driven trap mechanics scripted in Lua and a persistent save system.

Developer Portfolio (Next.js, React, JavaScript)

- Designed, built, and deployed a responsive personal portfolio with component-based UI and data-driven project cards, managing the codebase in Git/GitHub with continuous deployment.

TECHNICAL SKILLS

Languages: Java, Python, SQL, C/C++, JavaScript

Frameworks & Tools: Git / GitHub, JUnit (coursework), Next.js / React (personal projects)

Cloud & Platforms: Linux/UNIX, Windows, macOS · Building GCP/AWS cloud foundations

Data & Analytics: PostgreSQL, Power BI, Excel (KPI dashboards, analytical modeling)

Practices: Agile / Scrum, Functional & Regression Testing, CI/CD concepts, Microservices (coursework)

Languages Spoken: Spanish — Native | English — Advanced (Fluent)

EDUCATION

Universidad de Costa Rica — Computer Science

Mar 2021 – Jul 2026

Relevant coursework: Software Engineering, Software Testing, Data Structures, Relational Databases, Operating Systems, Concurrency & Parallel Programming, Networking Protocols.

Colegio Técnico de Aserri — Technical Degree in Software Development

Feb 2018 – Dec 2020

Programming, relational databases, and application development.
