PROFESSIONAL PROFILE

Junior Software Engineer and recent Systems Engineering graduate with enterprise experience at Mastercard and HCL Tech across data analysis, software testing, and release workflows in English-speaking Agile teams. Hands-on with Java, Python, SQL, Git/GitHub, and JUnit through engineering coursework and personal projects. Focused on software development and code quality within collaborative engineering teams.

PROFESSIONAL EXPERIENCE

MASTERCARD — Intern, Associate Consultant

Jan 2026 – Mar 2026

- Analyzed millions of payment transactions using SQL and Python to identify market performance trends across Caribbean clients, supporting strategic business recommendations.
- Designed and built a KPI dashboard in Excel consolidating performance metrics for Caribbean market accounts, surfacing optimization opportunities across client operations.
- Delivered 3 client-facing executive presentations in English, translating multi-million-record analyses into clear narratives for technical and non-technical stakeholders.

HCL TECH — Test Engineer

Aug 2025 – Dec 2025

- Executed daily functional and regression test cycles on new software builds, running ~30 manual test cases per application for tech and gaming industry clients under same-day turnaround, logging execution and results in Jira.
- Identified and escalated 3 critical defects ahead of release, documenting detailed reproduction steps and evidence in Jira in compliance with testing procedures and security controls to support release stability.
- Maintained test case documentation in Confluence for a 5-person QA team, sustaining consistent regression coverage across a continuous stream of new applications within Agile sprint timelines and daily stand-ups.

PROJECTS

Job Alert Service — Automated Job Data Ingestion (Python, GitHub Actions, REST APIs)

- Built an automated service that monitors multiple corporate job boards, reverse-engineering their public REST endpoints and HTML pages to retrieve newly published roles, handling session tokens, CSRF-protected requests, and offset-based pagination.
- Deployed the pipeline on GitHub Actions to run unattended on a fixed schedule, tracking seen postings in a SQLite database and deduplicating by unique job ID so each run delivers only newly published roles to Telegram; covered by 73 automated tests in CI.

Ragebait — 2D Platformer & Game Engine (C++, Lua, SDL2)

- Designed and built a custom entity-component-system (ECS) architecture with data-driven trap mechanics scripted in Lua and a persistent save system, versioned in Git/GitHub.

TECHNICAL SKILLS

Programming Languages: Java, Python, SQL, C/C++, JavaScript, Lua

Frameworks & Libraries: React, Next.js, JUnit, pytest, SDL2

Databases & Data: PostgreSQL, MySQL, SQLite, Power BI, Excel (KPI dashboards, analytical modeling)

Tools & Platforms: Git / GitHub, GitHub Actions, Telegram Bot API, Jira, Confluence, Vercel, Linux/UNIX

Methodologies & Practices: Agile / Scrum (sprints, daily stand-ups), code review and Git workflows, unit and automated testing (pytest), CI/CD with GitHub Actions, functional and regression testing, test case design and execution, defect tracking, test documentation, SDLC

Cloud & Architecture (coursework): GCP and AWS fundamentals, microservices architecture

Languages Spoken: Spanish — Native | English — Advanced (Fluent)

EDUCATION

Universidad de Costa Rica — Computer Science

Mar 2021 – Jul 2026

Relevant coursework: Software Engineering, Software Testing, Data Structures, Relational Databases, Operating Systems, Concurrency & Parallel Programming, Networking Protocols.

Colegio Técnico de Aserri — Technical Degree in Software Development

Feb 2018 – Dec 2020
